Summary

This Development Servicing Plan (DSP) covers water supply developer charges in regard to the Tenterfield, Urbenville and Jennings development areas serviced by Tenterfield Shire Council.

This DSP document has been prepared in accordance with the 2016 Developer Charges Guidelines for Water Supply, Sewerage and Stormwater issued by the Minister for Lands and Water, pursuant to Section 306 (3) of the *Water Management Act, 2000*.

The area covered by each DSP, and the existing and proposed works serving the area are shown on the document in Section 12.

The timing and expenditures for works serving the area covered by each DSP are shown in Section 4.

Levels of service to be provided in each DSP area are summarised in Section 5.

The water supply developer charges for the areas covered by this DSP document have been determined as follows:

Table 1-1 Proposed Developer Charges

Service	DSP Name	Developer Charge (\$ per ET)
Water Supply	DSP Area A <ul style="list-style-type: none">▪ Tenterfield▪ Urbenville	\$10,746
	DSP Area B <ul style="list-style-type: none">▪ Jennings	\$4,108

Developer charges relating to this DSP document will be reviewed after a period of 4 to 8 years.

In the period between any review, developer charges will be adjusted annually on the basis of the movements in the CPI for Sydney, excluding the impact of GST.

The developer shall be responsible for the full cost of the design and construction of water supply and sewerage reticulation works within subdivisions section.

Background information containing all the critical data including calculation models behind each DSP is available on request (e.g. on USB).

1 Introduction

Section 64 of the *Local Government Act, 1993* enables a local government council to levy developer charges for water supply, sewerage and stormwater. This derives from a cross-reference in that Act to Section 306 of the *Water Management Act, 2000*.

A Development Servicing Plan (DSP) details the water supply, sewerage and/or stormwater developer charges to be levied on development areas utilising a water utility's water supply, sewerage and/or stormwater infrastructure.

This DSP document covers water supply developer charges in regard to the Tenterfield, Urbenville and Jennings development areas served by Tenterfield Shire Council (TSC).

This DSP document has been prepared in accordance with the 2016 Developer Charges Guidelines for Water Supply, Sewerage and Stormwater issued by the Minister of Lands and Water, pursuant to Section 306 (3) of the *Water Management Act, 2000*.

This DSP document supersedes any other requirements related to water supply developer charges for the areas covered by this DSP. This DSP takes precedence over any of TSC's code or policies where there are any inconsistencies relating to water supply developer charges.

DRAFT

2 Administration

2.1 DSP Name and Area Covered

The service area boundaries within this DSP are defined by the extent of the water supply systems within the LGA. These boundaries capture the existing and future developments served by the TSC. Table 2-1 outlines the service areas.

Table 2-1 DSP name and area covered

DSP Name	Area Covered
Tenterfield	<p>The area covered by this DSP is shown on Plan 360791-002-GS-002-ZoningPlan_Tenterfield.</p> <p>The DSP area is defined as the area served by the Tenterfield water supply system.</p>
Urbenville	<p>The area covered by this DSP is shown on Plan 360791-002-GS-004-ZoningPlan_Urbenville.</p> <p>The DSP area is defined as the area served by the Urbenville water supply system.</p>
Jennings	<p>The area covered by this DSP is shown on Plan 360791-002-GS-003-ZoningPlan_Jennings.</p> <p>The DSP area boundary is defined as the area served by the Southern Downs Regional water supply system within Tenterfield Shire Council area.</p>

2.2 Payment of Developer Charges

Developer charges will be determined and levied in accordance with the provisions of this DSP document at the time of considering an application for a compliance certificate under Section 305 of the *Water Management Act 2000* or a construction certificate under Section 109 of the *Environmental Planning and Assessment Act 1979* or at the time of issuing a notice or other form of written advice, e.g. under the SEPP (*Exempt and Complying Development Codes*) 2008. The time limit for payment of developer charges will be included in the notice of determination or will be advised to the developer by a separate notice. The amount of any developer charges not paid within the specified time limit will lapse. Any subsequent determination of developer charges will be made in accordance with TSC's then current DSP.

2.3 Dispute Resolution

Disputes will be resolved in accordance with Section 2.9 of the Guidelines. TSC is not a member of the Electricity and Water Ombudsman (EWON).

3 Demographic and land use planning information

3.1 Growth Projections

Growth projections for Tenterfield Local Government Area (LGA) population are show in Table 3-1. These projections are from 2019 to 2049, which is TSC's current planning horizon.

The population and number of Equivalent Tenements (ETs) in January 1996 (ie.1995/96) are also indicated.

ET calculations are included in Section 7.3 of this DSP document.

Given the low population growth rate and its volatility to even small changes in new developments, an alternate reference was considered for the growth rate to be used for ETs. Analysing the number of connected properties within the LGA to the water supply systems, yields a more consistent growth rate of 0.68% and provides a more reliable basis for forecasting the ETs and performing the required calculations for the developer charges. This is shown in Table 3-2.

Table 3-1 Projected population growth

Year	Population	Population Growth Rate (% p.a.)	Adopted ET Growth Rate (%pa) based on the connect properties
1995/96	6,195		
2018/19	7,210	0.28%	0.68%
2019/20	7,230	0.28%	0.68%
2020/21	7,250	0.28%	0.68%
2021/22	7,250	0.00%	0.68%
2022/23	7,250	0.00%	0.68%
2023/24	7,250	0.00%	0.68%
2024/25	7,250	0.00%	0.68%
2025/26	7,250	0.00%	0.68%
2026/27	7,250	0.00%	0.68%
2027/28	7,250	0.00%	0.68%
2028/29	7,250	0.00%	0.68%
2029/30	7,250	0.00%	0.68%
2030/31	7,250	0.00%	0.68%
2031/32	7,230	-0.28%	0.68%
2032/33	7,210	-0.28%	0.68%
2033/34	7,190	-0.28%	0.68%
2034/35	7,170	-0.28%	0.68%
2035/36	7,150	-0.28%	0.68%
2036/37	7,150	0.00%	0.68%
2037/38	7,150	0.00%	0.68%
2038/39	7,150	0.00%	0.68%
2039/40	7,150	0.00%	0.68%
2040/41	7,150	0.00%	0.68%
2041/42	7,150	0.00%	0.68%
2042/43	7,150	0.00%	0.68%
2043/44	7,150	0.00%	0.68%

Year	Population	Population Growth Rate (% p.a.)	Adopted ET Growth Rate (%pa) based on the connect properties
2044/45	7,150	0.00%	0.68%
2045/46	7,150	0.00%	0.68%
2046/47	7,150	0.00%	0.68%
2047/48	7,150	0.00%	0.68%
2048/49	7,150	0.00%	0.68%

Table 3-2 Connected Properties for water supply

Year	LGA	Tenterfield	Urbenville	Jennings
2008	2,033	1,800	150	83
2009	2,044	1,815	145	84
2010	2,074	1,840	148	86
2011	2,072	1,840	148	84
2012	2,096	1,860	152	84
2019	2,184	1,916	165	103
Average growth rate		0.68%		

Growth projections for the number of Equivalent Tenements (ETs) for water supply are shown in Table 3-3. The ET in January 1996 is also indicated. ET calculations are included in Section 7.3 of the DSP document.

Table 3-3 Projected demand growth for ETs

Service Area	ETs 1996	Current ETs 2019	Projected ETs 2049	Total New ETs	Proportion of Growth
Jennings	85	100	122	22	4.19%
Tenterfield	1,807	2,112	2,584	472	88.55%
Urbenville	148	173	212	39	7.26%
Total	2,041	2,385	2,918	533	100%

3.2 Land Use Information

This DSP document should be read in conjunction with Tenterfield Local Environmental Plan (LEP) 2013 which sets the framework for planning and development and applies land zonings across the LGA. These zonings specify the land uses permitted in each of the zones and provide development standards that may apply to specific developments. Tenterfield currently does not have any specific strategies in place to guide future residential and commercial development across the LGA. Low population growth has resulted in most developments being in-fill development within Tenterfield itself or small subdivisions on the edge of established towns and villages.

On 1 March 2018, the NSW Government updated the Environmental Planning and Assessment Act 1979 with a number of changes required to be implemented at various stages over the next few years. This included the requirement for Council's to prepare a Local Strategic Planning Statement (LSPS) set out the 20-year vision for land-use in the local area, the special character and values that are to be preserved and how change will be managed into the future. This would, in turn, inform the future Local Housing Strategy and any LEP amendments that may be required to implement the outcomes of the LSPS. The requirement to deliver the LSPS and associated LEP Review is late 2019.

4 Water Supply Infrastructure

The existing and proposed water supply headworks serving the areas covered by this DSP are shown on plans in Section 12.

The existing and proposed water supply distribution works serving the areas covered by this DSP document are shown on Plans in Section 12.

4.1 Existing Capital Costs

The estimated MEERA capital cost of water supply capital works servicing the areas covered by this DSP document are shown in Section 14. Note that only those assets built in the last 30 years are included.

4.2 Future Capital Works Program

The timing and expenditure for water supply capital works (including backlog works) serving the area covered by this DSP document are shown in Section 15.

4.3 Reticulation Works

The developer shall be responsible for the full cost of the design and construction of water supply reticulation works within subdivisions.

5 Levels of Service

System design and operation are based on providing the following levels of service (LOS). Typical levels of service are outlined below.

Further information on levels of service is available from:

- > Tenterfield Shire Council's Strategic Business Plan for Water Supply and Sewerage Services, December 2015, (available at www.tenterfield.nsw.gov.au).
- > NSW Water and Sewerage Strategic Business Planning Guidelines, NSW Office of Water, July 2011, (available at www.water.nsw.gov.au).

5.1 Water Supply

The LOS that apply to TSC's water supply system are the targets that TSC aims to meet. These targets are not intended as a formal customer contract. The key LOS provided in Tenterfield Shire Council's Strategic Business Plan for Water Supply and Sewerage Services 2015 are found in Table 5-1.

Table 5-1 Water Supply Levels of Service

Description	Units	Target Level of Service
Availability of Supply	-	All residential and non-residential properties within the defined service area.
Peak Day Demand	L/dwelling/day	2,000
Average Annual Demand	kL/dwelling/year	190
Fire Fighting	L/s	Water will be available from the fire hydrants for firefighting at minimum flow rates determined by guidelines for specific types of development as set out in Local Government Regulations and the conditions established by the NSW Fire Brigade
Pressure (when conveying maximum instantaneous demand (6l/min)):		
Minimum pressure	Metres head	12 except for existing high level zones at all times
Maximum static pressure	Metres head	90
Potable Water Quality	Compliance with ADWG 2011	
Consumption Restrictions in Drought		
Maximum frequency of restrictions	Number of times per 10 years	5
Maximum duration of restrictions	Months/10 year period	10
Ability to supply demand through the worst drought on record	% of water demand	90(i.e. a 10% reduction in consumption).
Interruptions to Supply (per year per supply)		
Planned (95% of time)		
Notice given to domestic customers (between 9am and 4pm)	Days	2 weeks
Notice given to industrial and commercial customers (times to be negotiated)	Days	2 weeks
Unplanned		
Maximum duration	Hours	<<4 hrs
Maximum interruptions to supply	Per 1,000 properties p.a.	40

Description	Units	Target Level of Service
Main breaks	Per 100 km main p.a.	25
Service Provided		
Time to provide an individual, residential connection to water supply in services area	Working days	5
Response Time (time to have staff onsite or to investigate a problem or answer an enquiry)		
<i>Priority 1: A complete failure to maintain continuity of supply to large number of customers or critical user at critical time</i>		
Possible Issues: Broken water main, broken service, jammed hydrant, no water, dirty water, leak creating a major issue. Typical Effects: Personal injury or risk to public health, loss of supply, major property damage, failure to maintain quality or quantity of service, large volume of water wasted, significant unplanned depletion of service reservoir, major environmental impact.	Repairs to commence: Within 0.5 hour (during work hours) Within 1 hours (after work hours)	
<i>Priority 2: Known fault, non-urgent</i>		
Possible Issues: Service disconnection, faulty hydrant/valve, missing hydrant. Typical Effects: Need for preventative maintenance, minor customer impact.	Programmed Maintenance	

6 Design Parameters

6.1 Water Supply

Investigation and design of water supply system components is based on the Water Supply Investigation Manual (1986).

The following technical reports relate to the system components in this DSP document:

- > Council Standards for Engineering Works Policy
- > Council Standards for Engineering Works Preface and Supplementary Notes
- > TSC has published a range of asset management documentation that covers the water system and contains the management strategy for the water network. The documents include:
 - > Water Supply Asset Management Plan, 2018 (available at www.tenterfield.nsw.gov.au)
 - > Asset Management Strategy 2017 – 2027, 2017
 - > Tenterfield Shire Council's Strategic Business Plan for Water Supply and Sewerage Services, December 2015, (available at www.tenterfield.nsw.gov.au).

DRAFT

7 Developer Charges Calculation – Water Supply

All new properties and properties with change in use which are subject to payment of water supply charges are liable for payment of developer charges. An ET is the basic unit to determine the loading that the development will place on the water supply system. One ET represents the equivalent loading for a single, detached residential dwelling. TSC uses the NSW Water Directorate's Guidelines for Determining Water ET Figures.

Credit for existing use is applied in the calculation of the ET loadings, as the developer charges are levied for additional ET loading only. For example, the first lot in residential subdivisions is exempt from developer charges where the lot is already connected to the water supply system. Properties not already rated for water supply do not receive the one lot credit.

7.1 Summary

The developer charges for the area covered by this DSP document are as follows:

Table 7-1 Summary of proposed water supply developer charges

DSP Area	Capital Charge (\$ per ET)	Reduction Amount (\$ per ET)	Calculated Maximum Developer Charge (\$ per ET)	Adopted Developer Charge (\$ per ET)
DSP Area A <ul style="list-style-type: none"> ▪ Tenterfield ▪ Urbenville 	\$7,920	-\$2,826	\$10,746	\$10,746
DSP Area B <ul style="list-style-type: none"> ▪ Jennings 	\$1,282	-\$2,826	\$4,108	\$4,108

These amounts have been calculated on the basis of the information shown in Sections 7.2 to 7.7.

7.2 Service Areas

The water supply service areas and the basis of determining the service areas are as follows:

Table 7-2 Water supply service areas

Name of service area	Basis of determining the service area
Jennings	Area serviced by a separate water supply distribution system
Tenterfield	Area serviced by a separate water supply distribution system
Urbenville	Area serviced by a separate water supply distribution system

7.3 Equivalent Tenements (ETs)

As indicated in Section 5.1, one of the key levels of service (LOS) for Council's water supply is "the average residential water to be supplied for a detached residential dwelling (1 ET) per tenement", which is 190 kL/annum. Council's 2015 strategic business plan (available at www.tenterfield.nsw.gov.au) includes this LOS and was derived after careful consideration of the average residential water supplied per connected property over the last 10 years. Current billing and usage information show the average annual residential water volume supplied for a single detached residential dwelling as 159.8 kL. This number 159.8 kL has been adopted and represents 1 ET.

For each service area, the number of ETs to be served has been determined as the estimated annual water to be supplied to the service area divided by the volume for 1 ET.

ET projections for each service area are shown in Table 7-3. The ETs in January 1996 are also indicated.

Table 7-3 ET projections for water supply

Year	Number of ETs			
	Tenterfield	Urbenville	Jennings	Total ETs
1995/96	1,807	148	85	2,041
2018/2019	2,112	173	100	2,385
2019/20	2,126	174	101	2,401
2020/21	2,141	175	101	2,417
2021/22	2,155	177	102	2,434
2022/23	2,170	178	103	2,450
2023/24	2,184	179	103	2,467
2024/25	2,199	180	104	2,483
2025/26	2,214	181	105	2,500
2026/27	2,229	183	105	2,517
2027/28	2,244	184	106	2,534
2028/29	2,259	185	107	2,551
2029/30	2,274	186	108	2,568
2030/31	2,290	188	108	2,585
2031/32	2,305	189	109	2,603
2032/33	2,321	190	110	2,621
2033/34	2,336	192	110	2,638
2034/35	2,352	193	111	2,656
2035/36	2,368	194	112	2,674
2036/37	2,384	195	113	2,692
2037/38	2,400	197	113	2,710
2038/39	2,416	198	114	2,728
2039/40	2,433	199	115	2,747
2040/41	2,449	201	116	2,765
2041/42	2,465	202	117	2,784
2042/43	2,482	203	117	2,803
2043/44	2,499	205	118	2,822
2044/45	2,516	206	119	2,841
2045/46	2,533	208	120	2,860
2046/47	2,550	209	121	2,879
2047/48	2,567	210	121	2,899
2048/49	2,584	212	122	2,918

ET calculation details for each service area are shown in Section 13.

7.4 Capital Charge

The capital charge for each service area covered by this DSP document has been calculated using NPV spreadsheet method.

Under the NPV spreadsheet method, the capital cost of relevant assets and projected ETs served in a service area are entered into a spreadsheet. These capital costs are only for the share of the asset capacity used in the service area. The PV of capital cost and the PV of the new ETs are calculated, and the capital charge per ET is the PV of the capital cost divided by the PC of the ETs.

Calculations details for PV of ETs and PV of capital costs for each service area are shown in Section 16.

The summary of the capital charge calculations is shown in Table 7-4.

Table 7-4 Summary of capital charges

Service Area	PV of New ETs for pre-1996 assets @3%	PV of New ETs for post-1996 assets @5%	PV of capital cost for pre-1996 assets @3%	PV of capital cost for post-1996 assets @5%	Capital charge for pre-1996 assets	Capital charge for post-1996 assets	Capital charge per ET (\$)
Tenterfield	370	253	\$0	\$1,958,435	\$0	\$7,732	\$7,732
Urbenville	30	21	\$0	\$213,172	\$0	\$10,228	\$10,228
Jennings	18	12	\$0	\$15,890	\$0	\$1,282	\$1,282

7.5 DSP Area

Table 7-5 shows agglomeration of service areas into DSP areas of within 30% of highest capital charge.

Table 7-5 Agglomeration of service areas

Service Area	Capital Charge (2018/19 \$ per ET)	Percentage of Highest Capital Charge DSP Area A	Percentage of Highest Capital Charge DSP Area B
Urbenville	\$10,208	100%	
Tenterfield	\$7,732	76%	
Jennings	\$1,282	13%	100%

Weighted average capital charge for each DSP area is calculated by weighting by the PV of new ETs in each service area. The calculation is shown in Table 7-6.

Table 7-6 Weighted average capital charge

DSP Area	Service Area	Capital charge for each service area	New ETs in service area	PV of new ETs in service area	% of PV of new ETs in DSP area	Weighted component of the capital charge for each DSP area (\$ per ET)	Weighted capital charge for each DSP area (\$ per ET)
DSP Area A	Tenterfield	\$10,228	39	20	8%	\$774	\$7,920
	Urbenville	\$7,732	472	250	92%	\$7,147	
DSP Area B	Jennings	\$1,282	22	12	100%	\$1,282	\$1,282

The utility-wide weighted average capital charge is \$7,638.

7.6 Reduction Amount

Council has adopted the NPV of Annual Bills method to calculate the Reduction Amount. This method involves the difference between the revenue for annual bills, and annual OMA cost, projected for new development over the next 30 years. This is divided by the PV of the new ETs over 30 years to give the reduction amount.

The reduction amounts have been calculated as follows:

- > Income from annual bills at the commencement of the DSP = \$ 929.80 per ET
- > OMA cost at the commencement of the DSP = \$1,170.23 per ET
- > Net income = Annual bill – OMA cost (as above) = -\$240.43 per ET

Based on the calculations shown in Table 7-7, the resulting reduction amount is -\$2,826 per ET.

Table 7-7 Calculation of the reduction amount

Year	Total ETs	New ETs	NPV of new ETs	Cumulative new ETs	Net income from new ETs (\$)	NPV of net income from new ETs	Reduction amount (\$ per ET)
2018/19	2,385		267			-\$753,780	-\$2,826
2019/20	2,401	16		16	-\$3,847

2045/46	2,860	19		475	-\$114,205		
2046/47	2,879	19		494	-\$118,773		

Year	Total ETs	New ETs	NPV of new ETs	Cumulative new ETs	Net income from new ETs (\$)	NPV of net income from new ETs	Reduction amount (\$ per ET)
2047/48	2,899	20		514	-\$123,582		
2048/49	2,918	19		533	-\$128,150		

Calculation details for the reduction amount are shown in Section 17.

7.7 Cross-Subsidy

The cross-subsidy is the difference (%) between the annual bill with the calculated maximum developer charge and the increase in the annual bill with a proposed lower developer charge.

LWUs may elect to cap the developer charges for small villages in order to maintain affordability and to avoid 'stranded' assets in such villages.

LWUs may also cap other developer charges to maintain affordability, subject to adopting a commercial developer charge which recovers a significant proportion of the capital cost of the infrastructure.

The cross-subsidy, resulting from capping of developer charges must be disclosed in the DSP, the utility's Annual Report, annual Operational Plan and in communication materials for consultation with stakeholders as noted above.

Two options were developed and examined as follows.

- > Option 1 – No cross-subsidy – Calculated maximum developer charge adopted
- > Option 2 – Adopted cross-subsidy of 20%

A summary of the options for developer charges and cross-subsidy is shown in Table 7-8.

Table 7-8 Developer charges options – weighted average subsidy

Option 1 - No Cross Subsidy							
DSP Area	Service Area	Calculated Developer Charge	PV New ETs	Weighting	Weighted component	Weighted average developer charge	Weighted average cross-subsidy to developer charge
DSP Area A	Tenterfield	\$10,746	250	89%	\$9,511	\$10,464	\$0
	Urbenville		20	7%	\$778		
DSP Area B	Jennings	\$4,108	12	4%	\$175		

OPTION 2 - 20% DISCOUNT							
DSP Area	Service Area	Calculated Developer Charge	PV New ETs	Weighting	Weighted component	Weighted average developer charge	Weighted average cross-subsidy to developer charge
DSP Area A	Tenterfield	\$9,162	250	89%	\$8,109	\$8,936	\$1,528
	Urbenville		20	7%	\$664		
DSP Area B	Jennings	\$3,851	12	4%	\$164		

The impact of cross-subsidies on the annual water supply/ sewerage bill for each option is shown in Table 7-9 below.

Table 7-9 Impact of cross-subsidies on annual bill

Option	Required annual water supply bill per ET (\$)	Resulting increase in annual water supply/ sewerage bill (%)
1 – No Cross-subsidy	\$930	Nil
2 – Adopted Cross-subsidy (20%)	\$940	1.10%

Council has elected to not apply a cross-subsidy to the calculated developer charges for water services. This results in no increase to the current annual water supply bill due to developer charges.

Calculation details for the reduction amount are shown in Section 18.

DRAFT

8 Reviewing / Updating of Calculated Developer Charges

Developer charges will be adjusted on the 1st July each year on the basis of movements in the CPI for Sydney, in the preceding 12 months to December, excluding the impact of GST.

Developer charges will be reviewed by Council after a period of 4 to 8 years.

DRAFT

9 Background Information

Background information containing all the critical data including calculation models behind each DSP is available from TSC on request. The contact details are below:

Tenterfield Shire Council
Ph: (02) 6736 6000

The background document lists and references all the other studies that have been used as a source, including TSC's Strategic Business Plan, Financial Plan and the latest TBL Performance Report.

DRAFT

10 Other DSPs and Related Contribution Plans

This DSP document supersedes any other requirements related to water supply developer charges for the Tenterfield area covered by this DSP.

The related Section 64 Development Servicing Plan is:

- > *Tenterfield Shire Council Development Contributions Plan 2019 – Sewerage Services (Cardno, 2019)*

The related Section 7.11 and Section 7.11 Development Contributions Plans are:

- > *Tenterfield Shire Council Section 7.11 Levy Development Contributions Plan 2019 (Cardno, 2019)*
- > *Tenterfield Shire Council Section 7.12 Levy Development Contributions Plan 2019 (Cardno, 2019)*

DRAFT

11 Glossary

Annual Bill	LWU's annual water supply or sewage bill for an annual demand of 1 ET.
Asset	An asset (or part of an asset) including land and headworks assets that directly provides, or will provide, the developer services to development within the DSP area for which the Developer Charge is payable.
ADWF	Average dry weather flow. One of the design parameters for flow in sewers.
Annual Demand	The total water demand over a year. Used to size headworks components
Background Information	Contains all the critical data behind each DSP. This information should be made available electronically to developers on request, e.g. On a USB and should include the calculation models in Excel or similar electronic spreadsheet format, so that all components of the models can be investigated.
BOD	Biochemical oxygen demand. Used as a measure of the 'strength' of sewage.
Capital Cost	The Present Value (MEERA basis) of all expenditure on assets used to service the development.
Capital Charge	Capital cost of assets per ET adjusted for commercial return on investment (ROI)
CP	Section 94 Contributions Plan
CPI	Consumer price index.
DPI Water	A division of NSW Department of Primary Industries
Developer Charge (DC)	Charge levied on developers to recover part of the capital cost incurred in providing infrastructure to new development
Development Area	See DSP area
Discount Rate	The rate used to calculate the present value of money arising in the future.
DSP Document	Development Servicing Plan Document
DSP Area	That part of a water utility's area covered by a particular Development Servicing Plan. Also referred to as Development Area.
EP	Equivalent Persons (or equivalent population). Used as a design parameter for loadings of sewage treatment works.
ET	Equivalent tenement. The annual demand a detached residential dwelling will place on the infrastructure in terms of the water consumption or sewage discharge.
Government Subsidies	Government funds provided towards the capital cost of a project.
GST	Goods and services tax.
Headworks	Significant assets at the top end of the water systems or the bottom end of the

	wastewater and stormwater system. For example water headworks may comprise a system of storage reservoirs, water treatment works and major supply conduits.
IPART	The NSW Independent Pricing and Regulatory Tribunal.
kL	Kilolitre (1,000 litres).
LEP	Local Environmental Plan
LGNSW	Local Government and Shires Associations.
LSPS	Local Strategic Planning Statement
LWU	Local water utility (NSW). Excludes Sydney Water Corporation, Hunter Water Corporation, Gosford Council, Wyong Council, Essential Water and Fish River Water Supply.
MEERA	Modern Engineering Equivalent Replacement Asset. An asset value calculated on the basis that the asset is constructed at the time of valuation in accordance with modern engineering practice and the most economically viable technologies, which provides similar utility functions to the existing asset in service.
ML	Megalitre (1,000,000 litres, or 1,000 kilolitres).
Net Income	Annual bill minus OMA cost per ET.
NOW	NSW Office of Water, replaces by DPI Water since July 2015
NPV	Net present value means the difference between the Present Value of a revenue stream and the Present Value of a cost stream.
OMA	Operation, maintenance and administration (cost).
Peak Day Demand	The maximum demand in any one day of the year. Used to size water treatments works, service reservoirs, trunk mains and pumping stations in the distribution system.
Operating Cost	In relation to a DSP is the operation, maintenance and administration cost (excluding depreciation and interest) of a LWU in providing Customer services to a DSP area.
Periodic bills	The periodic bills (generally quarterly) levied by a LWU in accordance with their annual operational plan.
Post 1996 Asset	An asset that was commissioned by a LWU on or after 1 January 1996 or that is yet to be commissioned.
Pre-1996 Asset	An asset that was commissioned by a LWU before 1 January 1996.
PV	Present value. The current value of future money or ETs.
PWWF	Peak wet weather flow. One of the design parameters of flow in sewers
Real Terms	The value of a variable adjusted for inflation by a CPI adjustment

Reduction Amount	The amount by which the capital charge is reduced to arrive at the developer charge. This amount reflects the capital contribution that will be paid by the occupier of a development as part of future annual bills.
ROI	Return on investment. Represents the income that is, or could be, generated by investing money.
Service Area	An area serviced by a separate water supply system, an area served by a separate STW, a separate small town or village, or a new development of over 500 ETs.
SS	Suspended solids, or the concentration of particles in sewage. Used as a measure of the 'strength' of sewage.
STW	Sewage treatment works
TRB	Typical residential bill, which is the principal indicator of the overall cost of a water supply or sewerage system and is the bill paid by a residential customer using the utility's average annual residential water supplied per connected property.
TSC	Tenterfield Shire Council
WICA	Water Industry Competition Act, 2006
WICAA	Water Industry Competition Amendment (Review) Act, 2014
WTW	Water treatment works.

DRAFT

18 Cross-Subsidy Calculations

Council has elected to not apply a cross-subsidy to the developer charges for water services.

Option 1 - No Cross Subsidy							
DSP Area	Service Area	Calculated Developer Charge	PV New ETs	Weighting	Weighted component	Weighted average developer charge	Weighted average cross-subsidy to developer charge
DSP Area A	Tenterfield	\$10,746	250	89%	\$9,511	\$10,464	\$0
	Urbenville		20	7%	\$778		
DSP Area B	Jennings	\$4,108	12	4%	\$175		

OPTION 2 - 20% DISCOUNT							
DSP Area	Service Area	Calculated Developer Charge	PV New ETs	Weighting	Weighted component	Weighted average developer charge	Weighted average cross-subsidy to developer charge
DSP Area A	Tenterfield	\$9,162	250	89%	\$8,109	\$8,936	\$1,528
	Urbenville		20	7%	\$664		
DSP Area B	Jennings	\$3,851	12	4%	\$164		

Option	Required annual water supply / sewerage bill per ET (\$)	Resulting increase in annual water supply/ sewerage bill (%)
1 – No Cross-subsidy	\$930	
2 – Adopted Cross-subsidy (20%)	\$940	1.10%

Option 2 - 20% Discount	
Weighted subsidy	\$1,527.66
Income	\$2,217,470
ETs	2,385
Annual Bill 0%	\$930
Annual Bill 10%	\$940
Increase %	1.10%

Year	Total ETs	New ET's	Annual Subsidy	PV Annual with Subsidy	Annual Bill revenue - no subsidy	Annual Bill revenue - with subsidy	Additional amount required (Difference)	PV Additional Amount
