SEWER CCTV, CLEANING AND RELINING

Council's contractors Insituform, are currently in Tenterfield inspecting, cleaning and relining parts of the sewer network.

These important works ensure that the sewer operates normally and minimises the risk of sewer overflows. The inspection also helps inform Council's ongoing relining program.

Currently the crew are undertaking CCTV scanning of sewer lines and have completed 1km.

Relining works will commence sometime during week commencing 11 May 2020 and utilises cured-in-place technology. This involves winching the liner into the pipe followed by air inflation and steam curing. An installation machine inverts the liner upon itself while air pressure pushes it into position in the host pipe with steam curing of the liner in-situ.
